

# Epping Forest DVM Report March 2020

16 January- The second half of our AGM dealing with, and voting on, the accounts. And then a film that we had seen before but was well worth seeing again. This included bees transported to Californian almond trees and the spraying of the trees while the bees were still on them. Also, the hand pollination of trees in China because they had killed all their pollinators by spraying.

20 February- Swarm control, focusing on the purpose behind control manipulations rather than move this here and move that there. Which can be very confusing for beginners. Later when they have to do it, the manual will make more sense if they know the purpose for certain actions.

## Upcoming

19 March- Summer strategies

16 April- A talk by Michael Coe from Great Tilkey Honey

Membership- 200

Accounts- £6,432.73
